

CREATING YOUR EXPERIMENT

1. Use the BEAT command line to pull the base experiment: “beat experiment pull amohammadi/amohammadi/livdet/1/livdet”
2. Fork the experiment: “beat experiment fork amohammadi/amohammadi/livdet/1/livdet <user>/amohammadi/livdet/1/<name>”
3. Edit the experiment by starting the BEAT editor (“beat editor start”)
4. Replace the algorithm with the algorithm you created previously and click save.

5. Upload the new experiment to the web platform (“beat exp push <your experiment>”)
6. You should now be able to see your experiment by logging into the web platform.
7. Test your experiment by clicking “Go” (Note: the results seen here will not be accurate)
8. Create an attestation for your experiment once you are ready to submit (<https://www.idiap.ch/software/beat/docs/beat/docs/master/beat/beat.web/doc/user/attestations/guide.html>)
 - a. Must be done before the submission due date
